Scope and Authorization Statement

Sunrise Microfinance — Borrower Management Sandbox

Date: 11 October 2026

1. Project Description

This document authorizes security testing activity performed against the borrower-management sandbox described in this repository. The sandbox is a locally-run, Docker-based staging environment consisting of a simple web application (login + borrower list) and a PostgreSQL database, populated entirely with synthetically generated borrower records.

2. Test Boundaries

- In scope: the local Docker containers defined in docker-compose.yml (the 'app' and 'db' services), reachable only at http://localhost:8000 and localhost:5432 on the tester's own machine.
- Out of scope: any real production system, any real borrower data, any system belonging to any organization other than this sandbox.
- All borrower data in this sandbox is synthetically generated (see scripts/generate_borrowers.py) and does not represent any real person.
- This authorization is valid only for the local sandbox instance started via 'docker compose up' from this repository, and only for the duration of this training project.

3. Authorization

Sunrise Microfinance (fictional entity, used for this training exercise) authorizes the intern/tester named below to perform security testing, including but not limited to vulnerability scanning, manual testing, and exploitation proof-of-concept work, strictly within the boundaries defined in Section 2 above.
